SA3400

Synology® SA3400 is a highly scalable NAS with the capability to meet extensive data storage needs. Ideal for video post-production and large scale surveillance.

Room to Grow

Future-proof your storage architecture and fulfil your enterprises' needs with excellent performance and massive storage scalability. Synology SA3400 keeps up with your business growth, capable of enduring the data requirements of the future. Allow your business to grow without making expensive changes to the set up; simply add more drives to increase the capacity and ease the workload.

Keep your Assets Secure

Protect your business, home and other environments with reliable, intuitive Surveillance Station; delivering intelligent monitoring and video management tools to safeguard your valuable assets.

Reduce Downtime with Higher Speeds

For environments requiring higher speeds, Synology's SA3400 allows optional Ethernet add-in cards to be installed. Accelerate back-up and restore tasks with high speeds and keep your business running at peak performance.

Better Data Protection

Utilising a snapshot feature, the SA3400 system allows you to create a point-in-time copy of an entire shared folder. This protects your data if human error results in a lost or corrupt database. Enabling the data to be quickly restored back to the previous time at which the snapshot was created.
