MAKING IT PERFORM

Relieve the Headache of Upgrading Mixed Device Estates with Hypertec

Due to the COVID-19 pandemic, many organisations had to deploy home workers with equipment not usually standardised on, creating mixed device estates. Hypertec can help ascertain what devices are being used and help keep estates upgraded; ensuring users have the right machine and system performance profile best suited to device use.

Non-standardisation has a huge cost impact for organisations. Supporting mixed estates is costly for a number of reasons; low productivity caused by failing computers, unexpected crashes, viruses and other digital threats, plus the additional IT support costs to resolve these issues.

Reduce the cost of upgrading mixed device estates, Hypertec OEM Matched Memory delivers considerable cost savings against OEM prices at scale, without compromising on performance and quality. Matching Memory to machines as an OEM compatible solution is easy with the Hypertec Product Configurator, simply click the link and search for a device by category or OEM part number.

Get the support and assurance needed to confidently deploy upgrade solutions for unstandardised laptops. All Hypertec Memory comes with a Lifetime Warranty and is extensively QA tested. Complete with Free UK-based Technical, Pre and Post-Sales Support as standard, Hypertec works together with you to deliver bespoke upgrades.

Share the end-user friendly version of this PDF with customers to start the conversation. Hypertec can help you identify opportunities, find out what devices are being used and get them upgraded – keeping users working productively.

For more information about mixed device estate upgrades, or help finding the perfect Memory match, contact your Hypertec Account Manager today.
