

## Keep Employees Focused in Shared Workspaces

The hustle and bustle of shared workspaces can be enough to distract even the most focused of workers. Help **minimise background noise and keep workers concentrated and productive** throughout the day, wherever they're working with PORT<sup>®</sup> Wireless and Silent Deskset Bundles.

### Minimise Distractions with Total Silence

During busy days and busy environments its always better to have quieter keyboards; as not only does the sound of typing keys cause a distraction to surrounding workers, but the constant clicking sound even disrupts the concentration of the user. **Perfect for telecoms and other shared offices**, the PORT Silent Keyboard and Mouse **helps users stay focused, providing a better environment to get work done** as efficiently as possible.

### Equip Hot Desks with the Highly Compatible Desksets

Providing hot desks with the same keyboard and mouse creates **continuity for employees throughout the office**, but can often cause issues with compatibility. As many traditional keyboards and mice only work with either USB Type-A or Type-C devices, and may only provide limited features with different operating systems.

Bridge the connectivity gap, the Wireless Deskset Bundle is Windows, MAC OS and Andriod Compatible; as well as also USB-A and USB-C (via the included adapter) compatible. **Ideal for hotdesking and hybrid workers**, the 2-in-1 pack allows users to **connect from range of devices**.

### Simplify Multitasking with Multimedia Keys

Equipped with 104 Keys and 20 Multimedia and Shortcut keys to streamline multitasking, the Deskset makes it **quick and easy to control media and switch between applications**. Helping users keep the pace needed to complete demanding workloads.
